

Securely deliver medical images and reports to patients

- Increase patient retention and loyalty
- Improve patient satisfaction and outcomes
- Eliminate burning CD/DVD/s and printing films
- Reduce cost and streamline administrative tasks
- Differentiate your brand and service

The app is designed to give patients control over their medical studies. When the study is ready, the facility will send a notification to the patient's phone with a link to download the app and register. Once the data is validated, patients can access their medical exams anywhere, anytime - from their smartphones or tablets and share with other caregivers.

The solution helps facilities to balance high levels of clinical care with operational efficiency, cut CD/DVD burning expense and deliver top-notch care at the lowest cost. CareRad seamlessly integrates with any PACS system.
